DETAILED ACTION

The final rejection of 10-11-02 has been withdrawn.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 10-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lin in view of Awschalom et al. The primary reference discloses in col. 4, lines 60-67, col. 5, lines 1-55 and col.6, lines 45-67 a method of making a magnetic device comprising applying a magnetic layer to a substrate and a cap layer to the magnetic layer. the cap layer is annealed. The patentee also discloses that magnetic materials such as CoPtCr and various under-layers and seed layers and various anneal temperatures may be used. The patentee also discloses that ex- situ annealing may be used and in col.6, lines 45-55 discloses an alternative embodiment that includes in-situ annealing in a sputtering device in the formation of a magnetic device. It is the examiner's opinion that it would have been obvious for one having ordinary skill in this art at the time the invention was made to anneal the cap layer in col. 5, lines 25-40 as suggested in col. 6, lines 45-55. This is especially true since Awschalom et al discloses in col. 4, lines 35-45 that "in situ annealing is preferred, though not necessary, because it produces a less contaminated product". The various claimed time and thicknesses limitations are considered conventional and do not render these claims unobvious.
